# VIPGI 0.9.6

21/4/2004

The screenshot displays the VIPGI software interface with the following components:

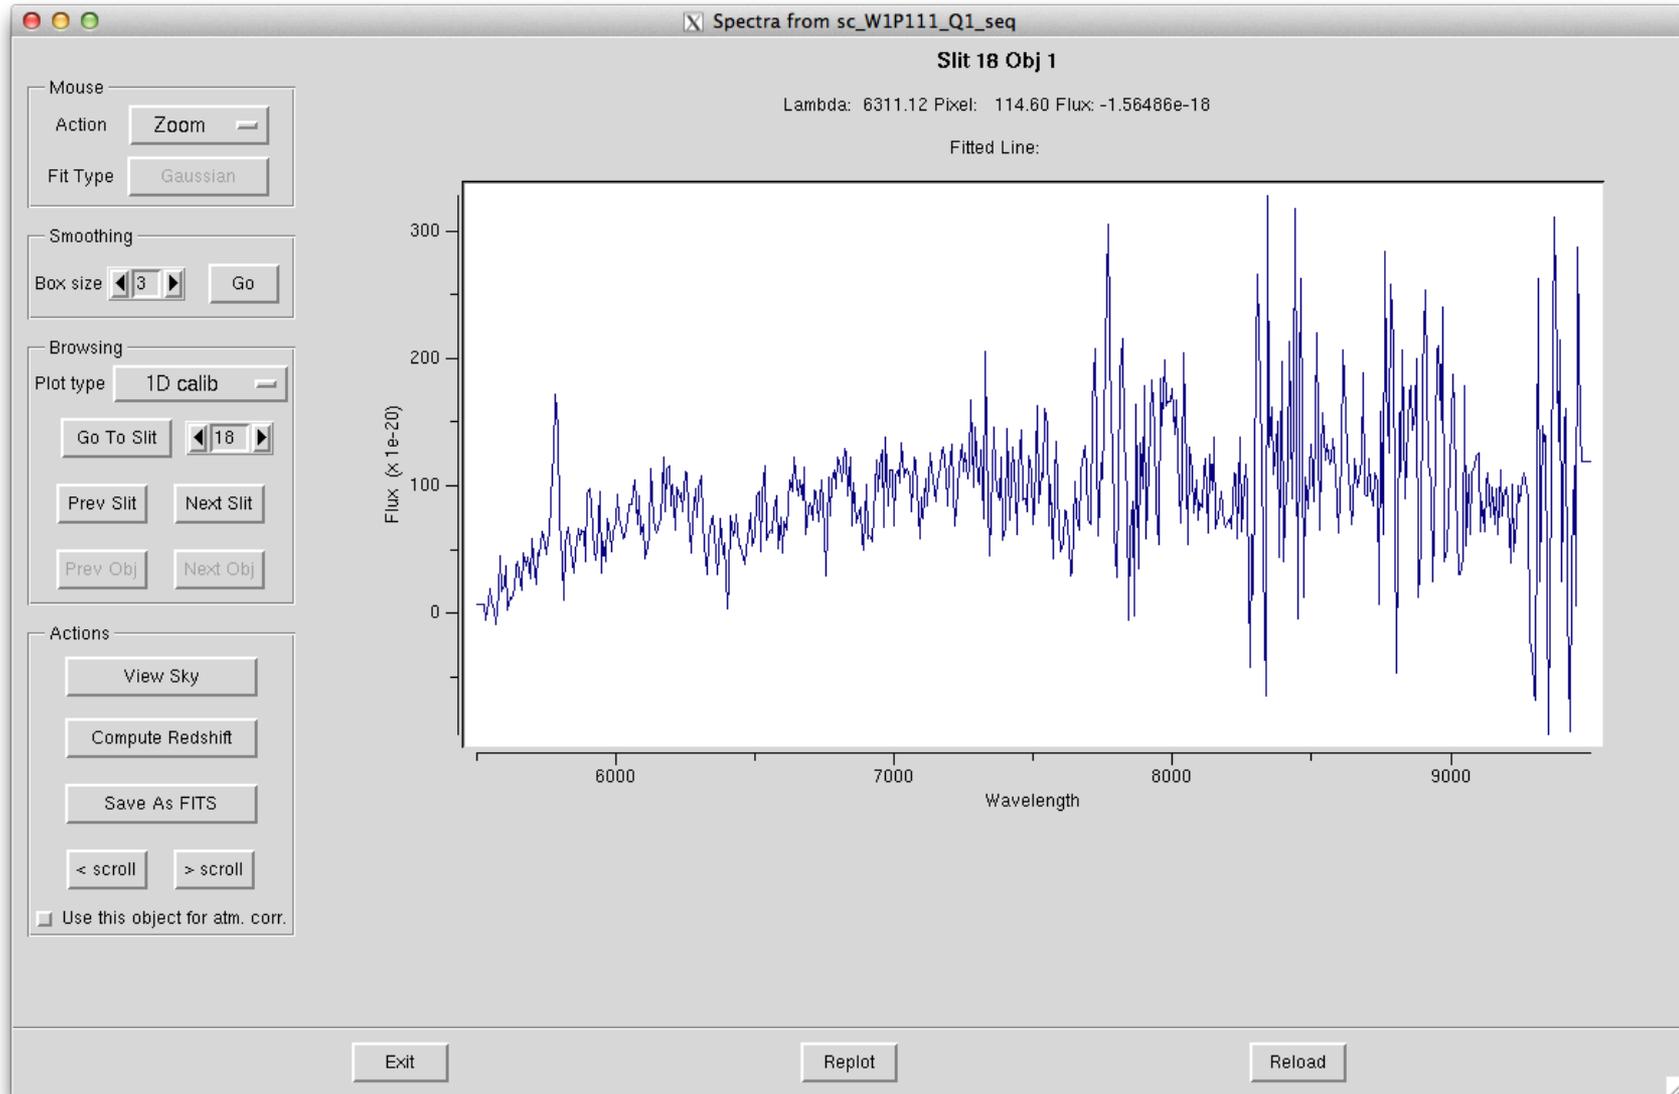

- Window Title:** X VIPGI
- Menu Bar:** Pipeline Organizer Table Parameter Files Help
- Toolbar:** Contains icons for file operations (new, open, save, delete, copy, paste), a search icon, a refresh icon, a lightbulb icon, and a help icon.
- Configuration:**
  - Ins. Mode: **MOS**
  - Obs. Date: **ALL**
- Actions Panel:** Includes tabs for Organizer, Reduction, Browsing, and Plotting. Buttons include: Rename Archive Files, Unpack Selected Files, Unpack All Files, Rename Selected File, Delete Selected Files, Clear Selection, Reload Organizer Table, Science2Lamp, Initialize KBRED, and Run KBRED blindly.
- Data Section:**
  - Quadrant tabs: Raw Data, Q1, Q2, Q3, Q4, All Quadrants.
  - Data Categories list: STD LR\_red, W1P111\_M1 LR\_red.
  - Single Frames List: Frame Type: **science**. Data Cat: W1P111\_M1 LR\_red. Files listed: sc\_W1P111\_LRred\_Q1\_1.fits, sc\_W1P111\_LRred\_Q1\_1\_BF.fits, sc\_W1P111\_LRred\_Q1\_2.fits, sc\_W1P111\_LRred\_Q1\_2\_BF.fits, sc\_W1P111\_LRred\_Q1\_3.fits, sc\_W1P111\_LRred\_Q1\_3\_BF.fits, sc\_W1P111\_Q1\_seq.fits.
  - Master Calibration Frames: Data Cat: W1P111\_M1 LR\_red. Files listed: msFlat\_W1P111\_Q1.fits, msLamp\_W1P111\_LRred\_Q1.fits.
- Disk Usage:** A bar chart showing usage for 'All Data [Gb]' with a scale from 0.0 to 3731.7. The bar is mostly red, with a small green segment at the end.
- Plotting:** A button labeled 'Plotting Single Spectrum' with a green indicator light.

6/4/2009

The screenshot displays the VIPGI software interface. At the top, the title bar reads "VIPGI" and the menu bar includes "Pipeline", "Organizer Table", "Parameter Files", and "Help". Below the menu bar is a toolbar with icons for file operations and help. The main interface is divided into several sections:

- Ins. Mode:** A dropdown menu set to "MOS".
- Actions:** A vertical panel on the left with tabs for "Organizer", "Reduction", "Browsing", and "Plotting". It contains buttons for "Rename Archive Files", "Unpack Selected Files", "Unpack All Files", "Rename Selected File", "Delete Selected Files", "Clear Selection", "Reload Organizer Table", "Science2Lamp", and "Advanced z tools".
- Data:** A central panel with tabs for "Raw Data", "Q1", "Q2", "Q3", "Q4", and "All Quadrants". It features a "Data Categories" list with "STD LR\_red" and "W1P111\_M1 LR\_red".
- Single Frames List:** A panel on the right with a "Frame Type" dropdown set to "science". It lists files under "Data Cat: W1P111\_M1 LR\_red", including "sc\_W1P111\_LRred\_Q1\_1.fits", "sc\_W1P111\_LRred\_Q1\_1\_BF.fits", "sc\_W1P111\_LRred\_Q1\_2.fits", "sc\_W1P111\_LRred\_Q1\_2\_BF.fits", "sc\_W1P111\_LRred\_Q1\_3.fits", "sc\_W1P111\_LRred\_Q1\_3\_BF.fits", and "sc\_W1P111\_Q1\_seq.fits".
- Master Calibration Frames:** A panel on the right listing "msFlat\_W1P111\_Q1.fits" and "msLamp\_W1P111\_LRred\_Q1.fits" under "Data Cat: W1P111\_M1 LR\_red".
- Disk Usage:** A horizontal bar chart at the bottom showing "All Data [Gb]" usage, with a scale from 0.0 to 3731.7 Gb.
- Plotting Single Spectrum:** A status bar at the bottom right with a progress indicator and a green light icon.

EZ

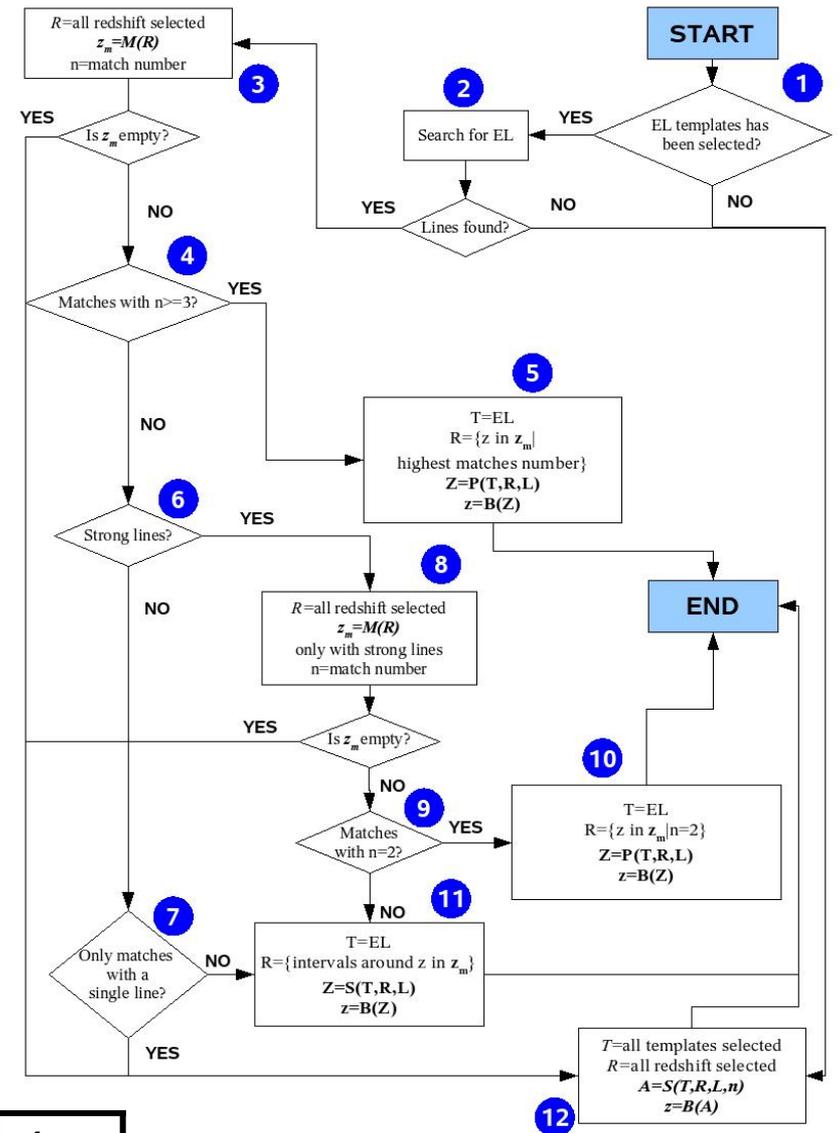

# **EZ: Easy-Z**

*(in collaboration with Roberto Scaramella and Stephane Paltani)*

***EZ satisfies the demand of a tool to measure redshifts in an automatic and reliable way from the huge amount of spectra provided by modern spectroscopic surveys***

- ***Written in python/C***
- ***Interactive/Batch mode***
- ***Uses a set of user defined templates and a combination of correlation and fitting algorithms***
- ***Flexible and modular architecture***

- REDSHIFT

## SEDs LIBRARY

$\chi^2$  MINIMIZATION

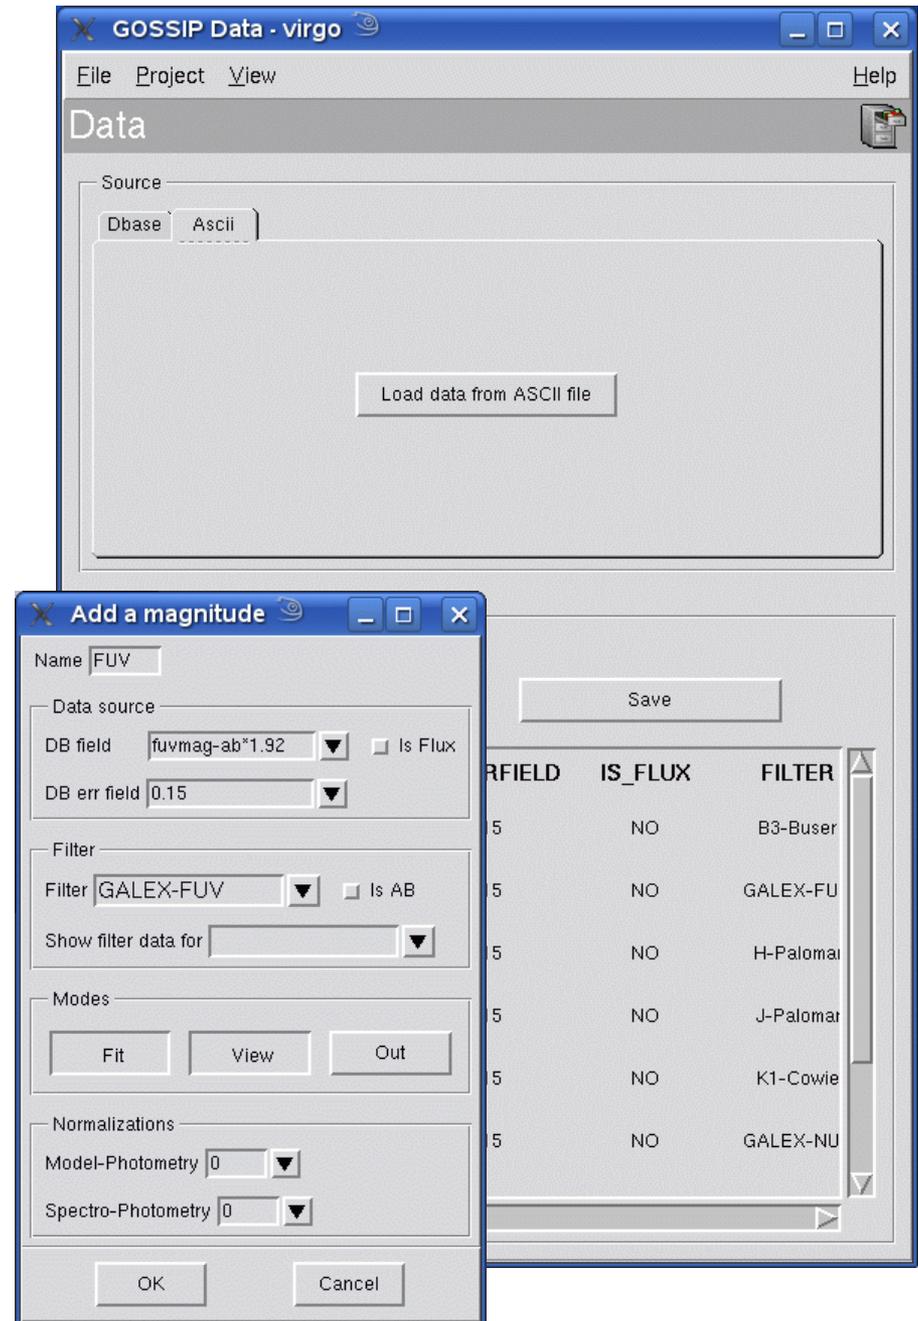

PDFs COMPUTATION

- STAR FORMATION HISTORY
- STAR FORMATION RATE
- STELLAR MASS
- ABSOLUTE MAGNITUDES
- ...

# GOSSIP

## GALAXIES SAMPLE

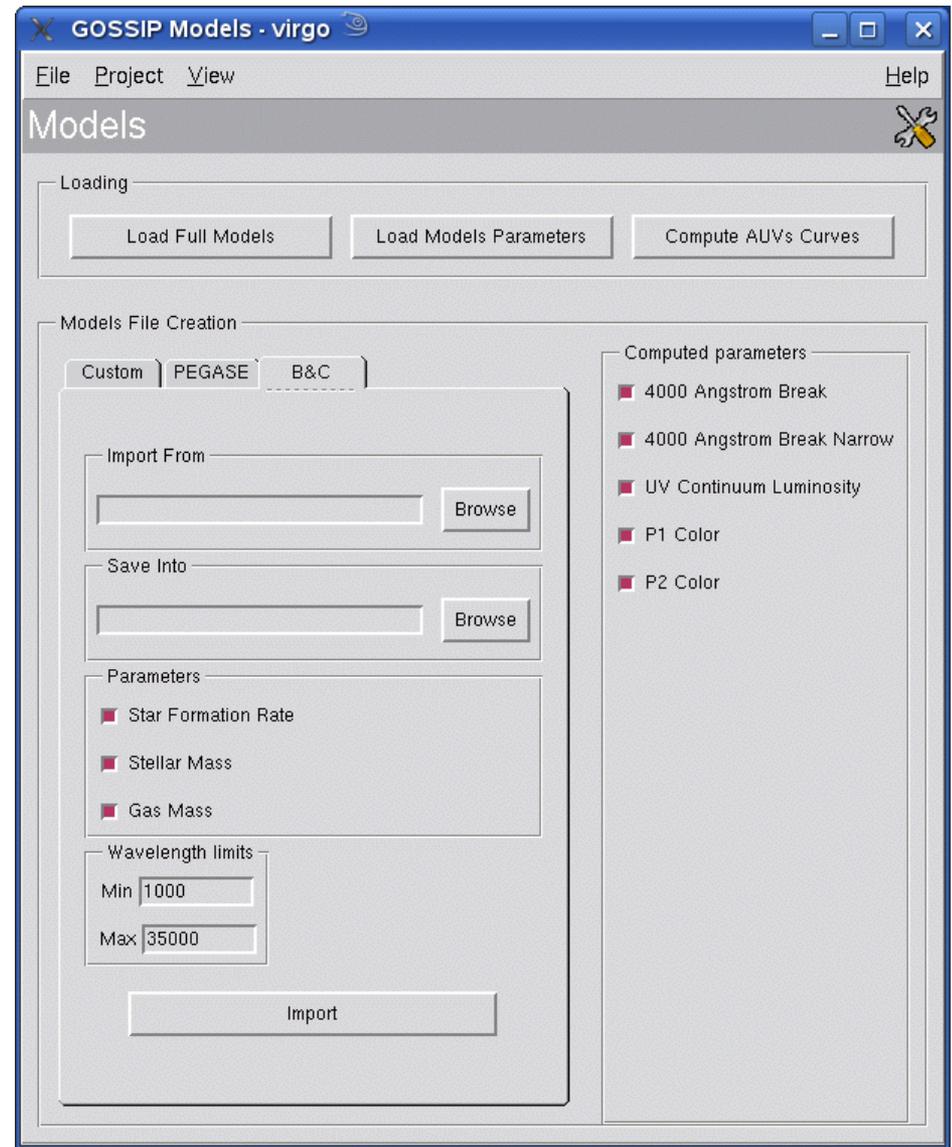

GOSSIP builds-up the observed SED of each object combining magnitudes in different broad bands from different instruments and also a spectrum.

# GOSSIP

## SEDs LIBRARY

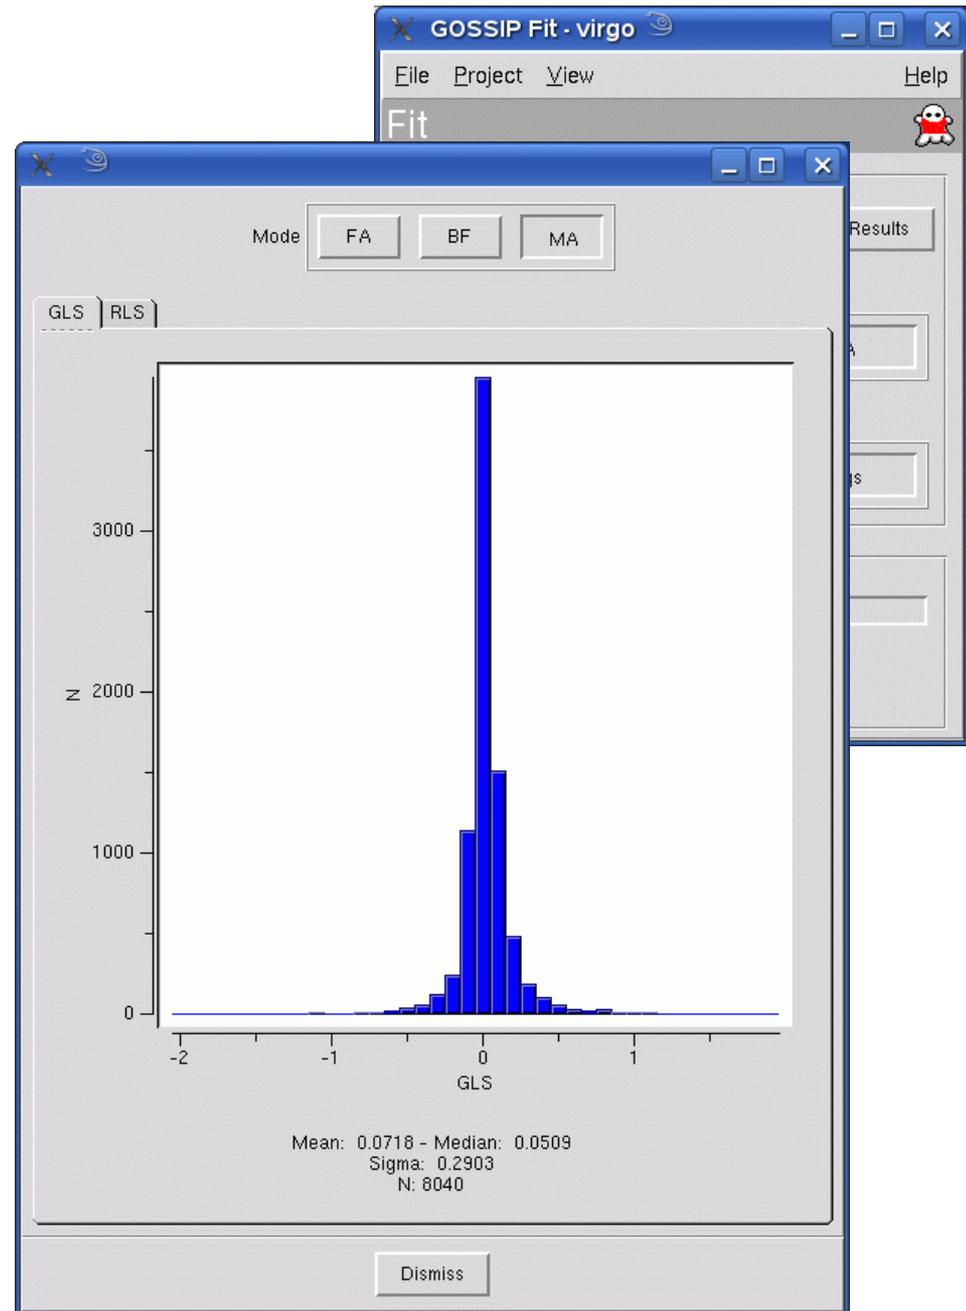

GOSSIP loads sets of user-defined synthetic models, but it is also able to load directly the output data files produced by the PEGASE and Bruzual & Charlot synthesis population codes.

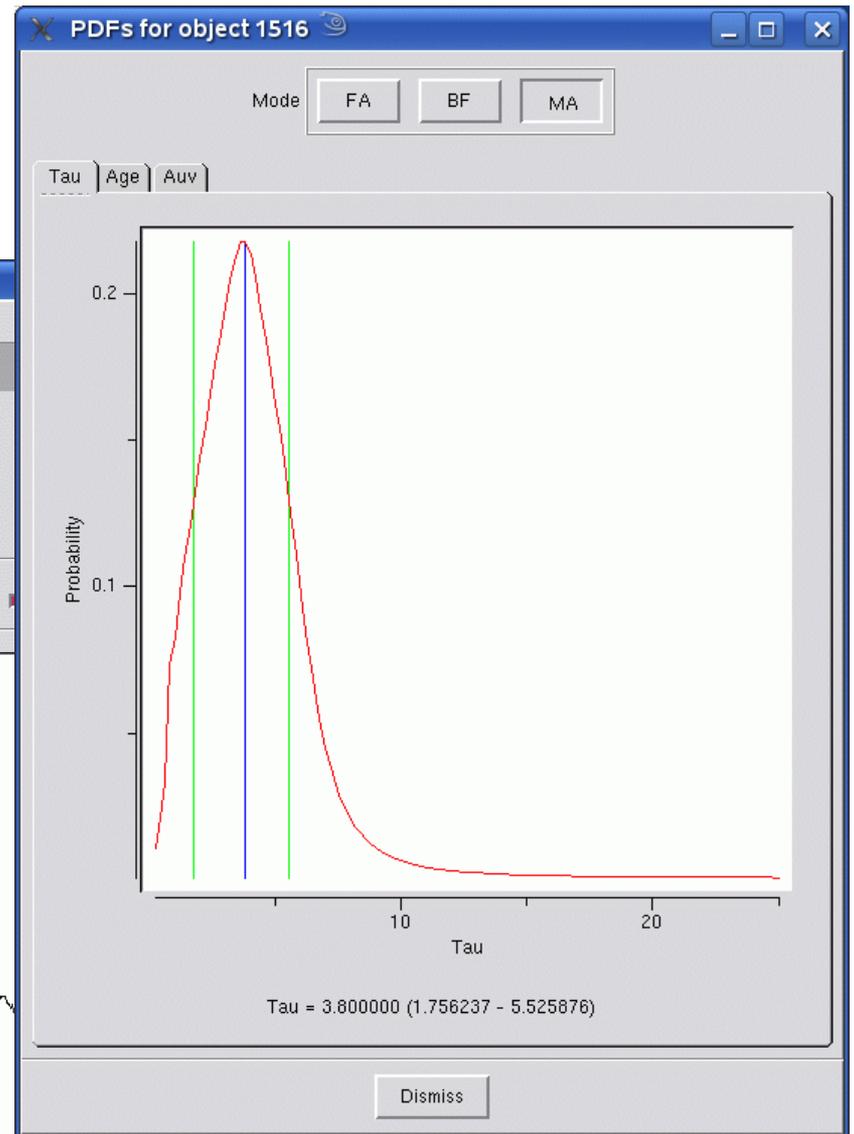

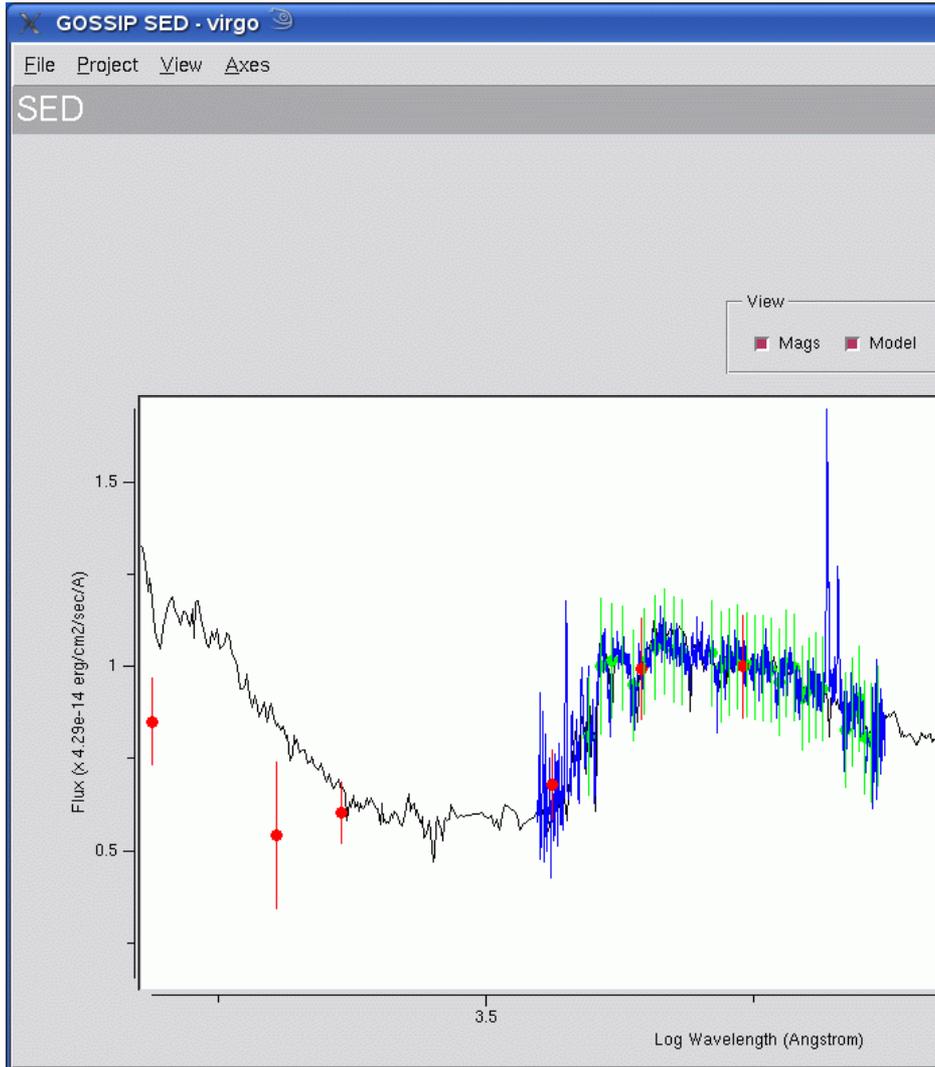

# GOSSIP

## FITTING

GOSSIP performs the  $X^2$  minimization procedure and the PDFs computation in batch mode on a single CPU or on a BEOWULF cluster. It performs also post-fitting operations like results checking and computation of absolute magnitudes.

# GOSSIP

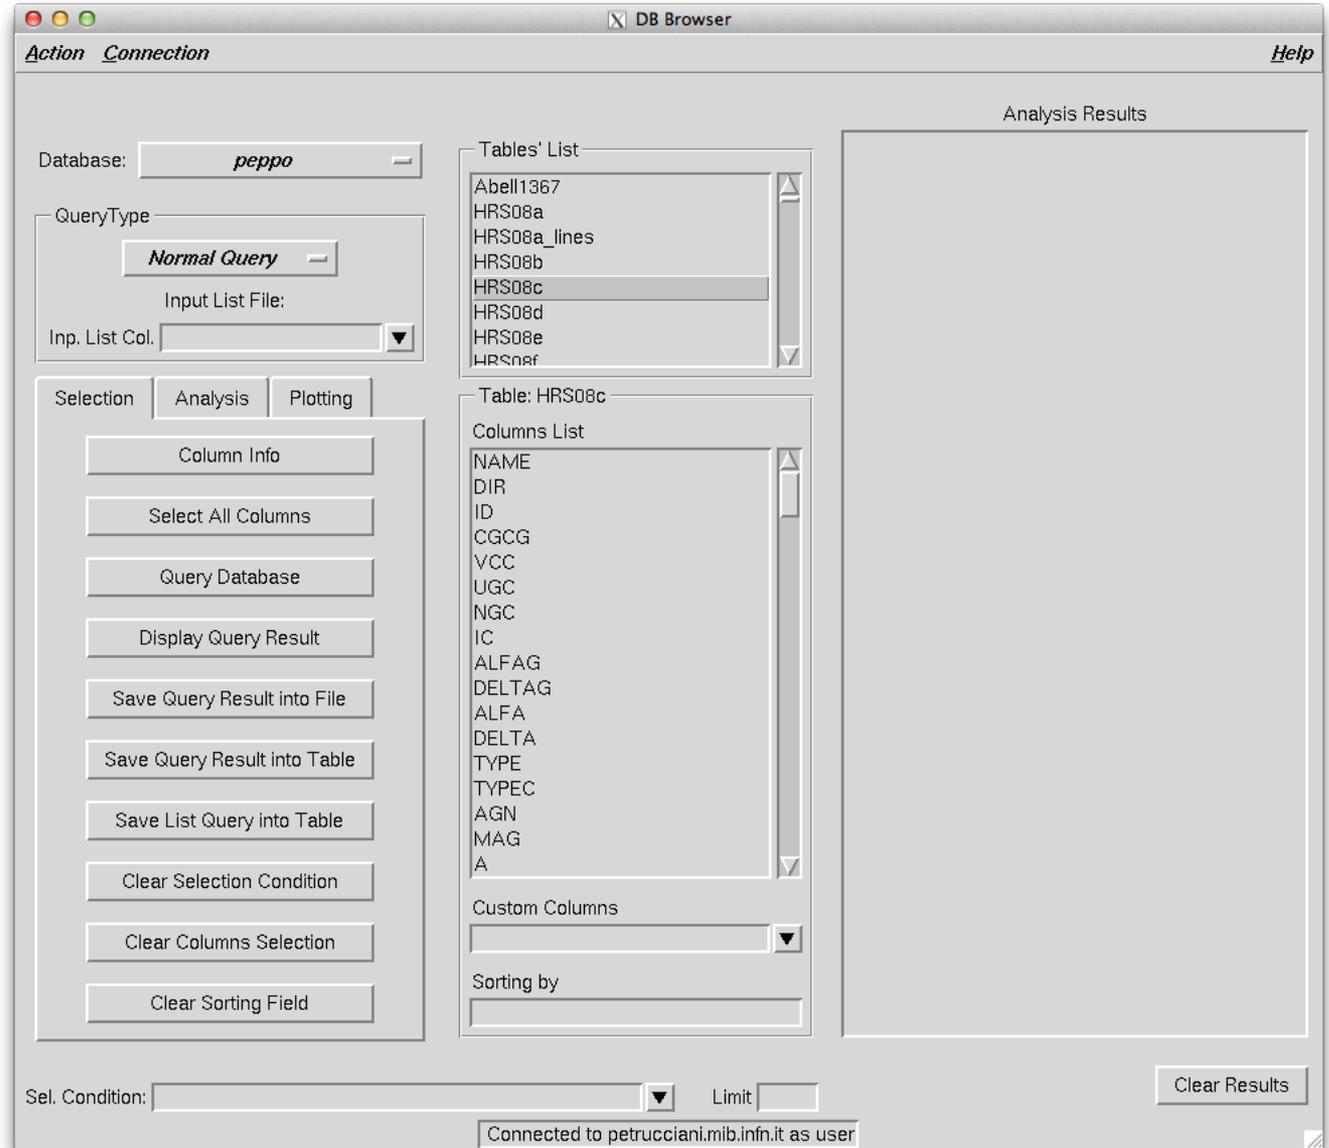

Compute

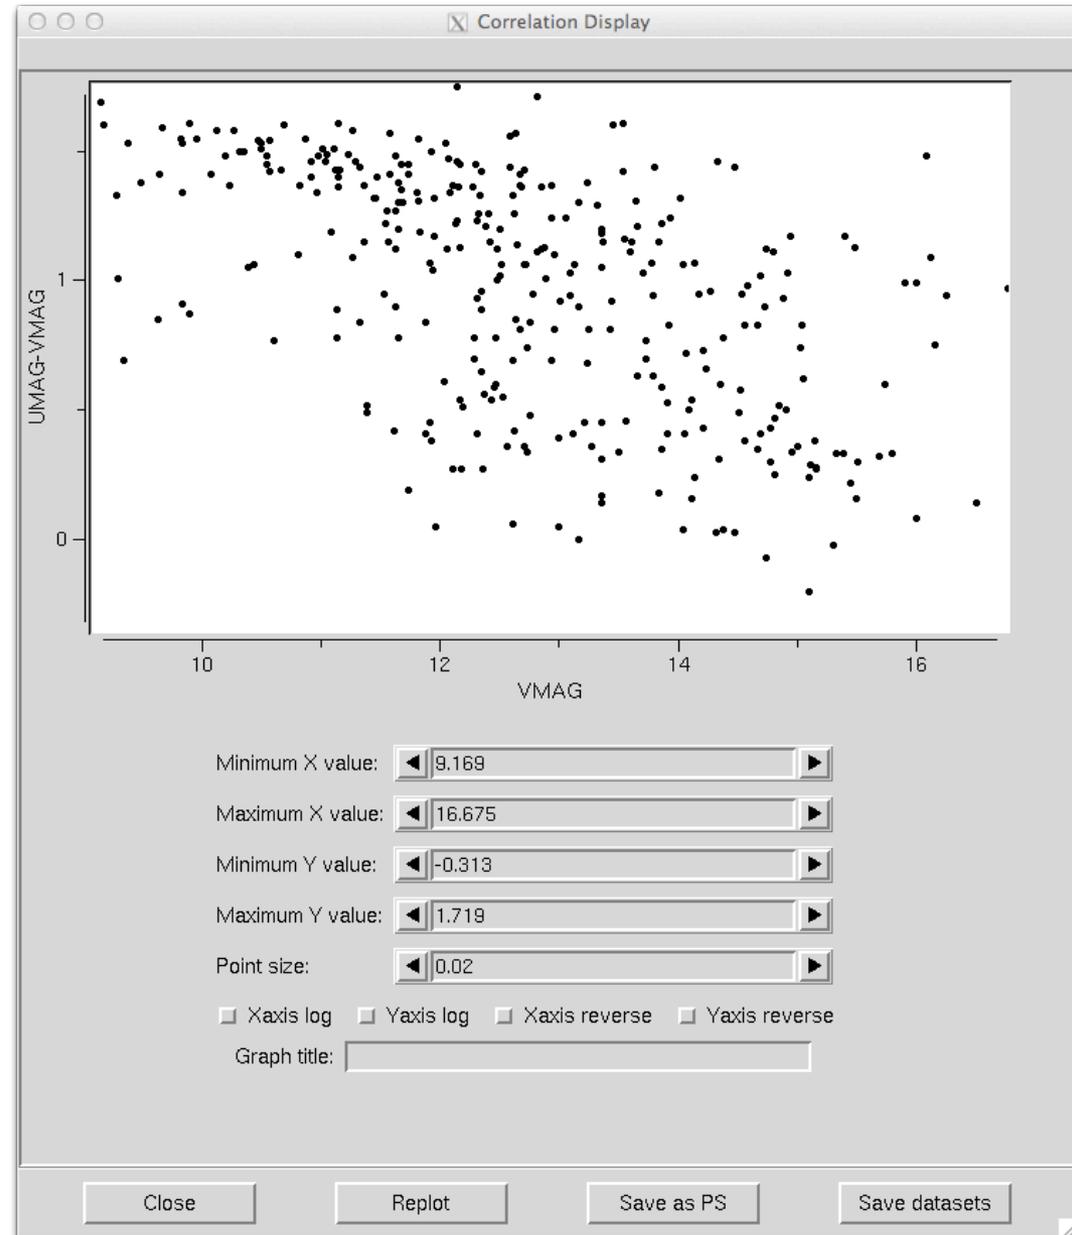

Mags PDFs Chi2

The 'Compute' section contains three buttons: 'Mags', 'PDFs', and 'Chi2'. The 'PDFs' button is currently selected, indicating that the PDF plot is the active view.

## Welcome to the Pandora Web Site

Home of the Pandora Group

PANDORA stands for  
"Programs for **A**stro**N**omial **D**ata **O**rganization **R**eduction and **A**nalysis".

- We develop software primarily for the astronomical community. Our programs are created with the purpose of speeding up and simplifying the handling of the huge amount of data produced by astronomical instruments of the last generation.
- We use the C language to obtain the maximum speed for computationally intensive operations, while for general purpose programs and graphical interfaces we love [Python](#) and its standard Tkinter graphical interface to the Tk set of widgets.
- We distribute our programs under the GNU General Public License (GPL)
- We develop programs for Linux/Unix systems. In all likelihood no Windows program will ever appear in these pages!
- We work in Milano, Italy, at the [Istituto di Astrofisica Spaziale e Fisica Cosmica](#) (IASF), which is now part of the Italian [Istituto Nazionale di Astrofisica](#) (INAF).

Mar 12th, 2007 [PYSTIC 0.9](#) released

Nov 13th, 2006 [SADIO 1.1.0](#) released

Jul 04, 2006 [VIPGI 1.1.1](#) released

PNGS ???

The screenshot shows a web browser window with the address bar containing "cosmos.iasf-milano.inaf.it/pandora/". The page features the "PANDORA" logo in a stylized, 3D font and the "IASF" logo. A navigation menu on the left includes buttons for Home, DBBROWSER, EZ, GOSSIP, SAMPY, SGNAPS, VIPGI, About Us, and Legal Stuff. A blue banner at the top right reads "Where Man Wins Against The Machine". The main content area has a blue header that says "Welcome to the Pandora Web Site" and "Home of the Pandora Group". Below this, a bold black text block states: "After more than five years, due to lack of manpower and funds, we cannot support the PANDORA programs and help-desk any more. Even the [petition](#) addressed to INAF President and top management in support of PANDORA activity has failed to produce any improvement in the situation." A second bold black text block follows: "Therefore, as of March 2011, the PANDORA project has been terminated." A final bold black text block provides contact information: "People interested in using or upgrading one or more former PANDORA software should contact the package main developer(s) to discuss the possibility of a joint collaboration on the project for which the software package is needed (see the individual package page for the list of names)."

PNGS ???

The screenshot shows a web browser window with the address bar displaying "cosmos.lambrate.inaf.it/pandora/petition.html". The browser's toolbar includes icons for Google, Android, CORSO, VOCE, CONN STAT, FIT, GOOGLE, PYTHON, PANDORA, ASTRO, IASF, and NEWS. The page header features the "PANDORA" logo in a stylized, 3D font and the "IASF" logo. Below the logos is a navigation bar with the text "Where Man Wins Against The Machine".

On the left side, there is a vertical menu with buttons for "Home", "DBROWSER", "EZ", "GOSSIP", "SAMPY", "SGNAPS", "VIPGI", "About Us", and "Legal Stuff".

The main content area is a light blue box containing the following text:

**To INAF President**

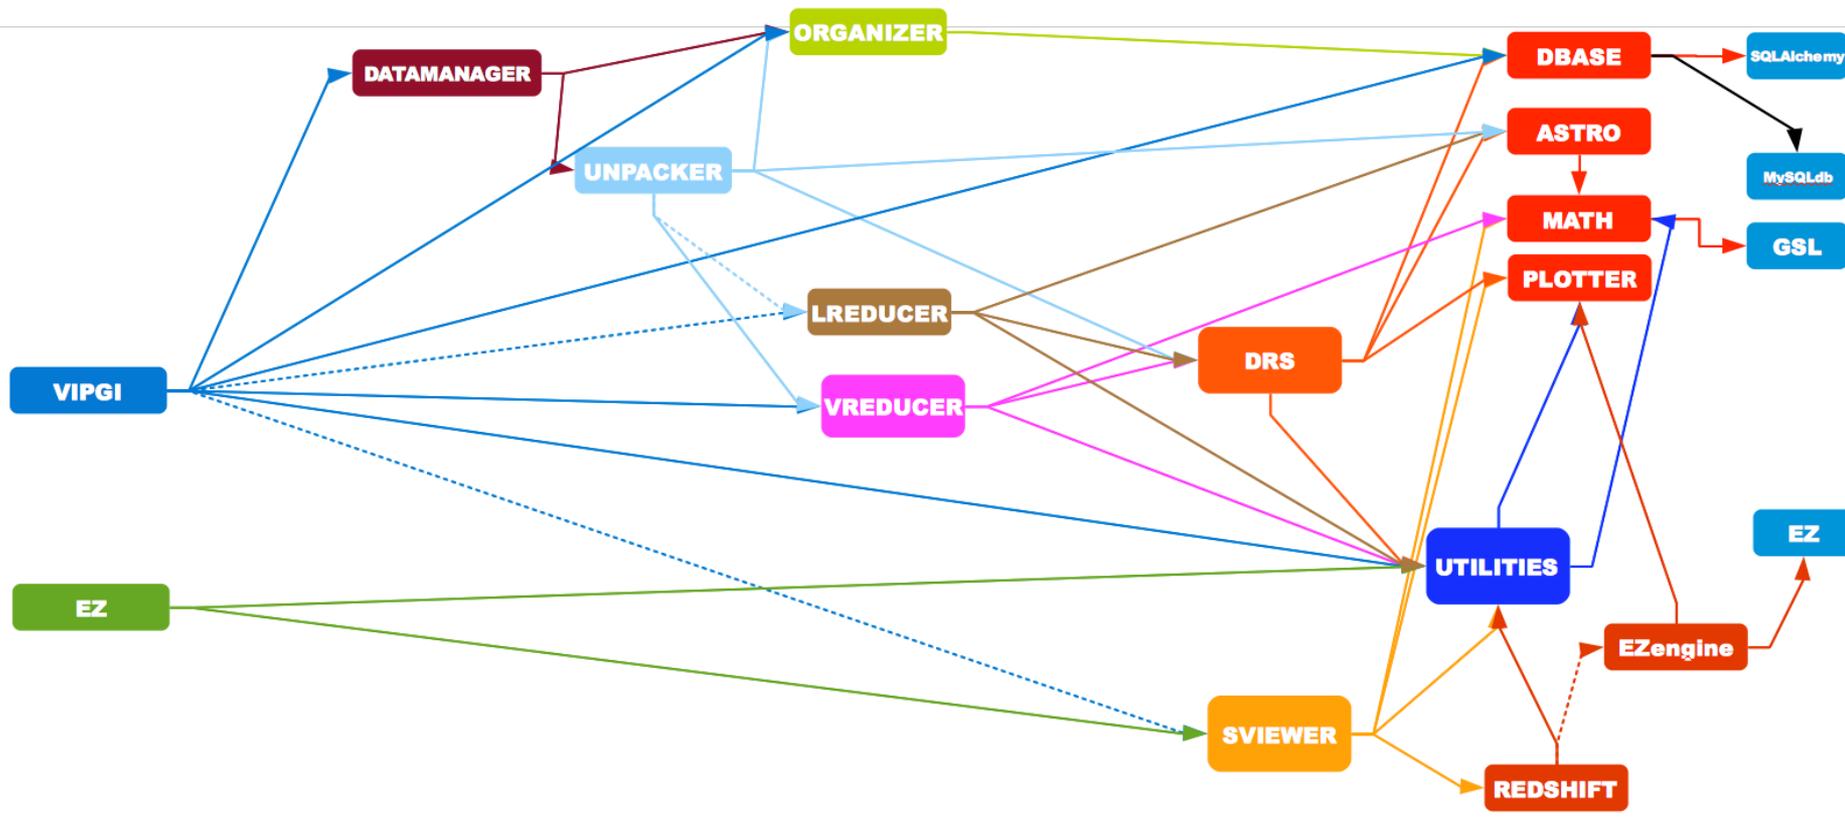

Since 2005 the PANDORA group at IASF has publicly distributed and supported eight different software packages, all devoted to optical spectroscopic data reduction and analysis. The packages have been downloaded and used by 422 people, and the help desk has answered more than 1500 requests. The pandora software has been extensively used for reduction and analysis of the major european spectroscopic surveys (VVDS, zCosmos, VIPERS) as well as for many smaller programs.

We understand that the activity of the Pandora group (help desk support, software maintenance and development of new tools) will be discontinued because of lack of funds (2010 applications have not been accepted) and dedicated manpower.

With this letter, we ask INAF to make every effort for continuing the funding of this service to the community, which constitutes also an important reservoir of knowledge for the new forthcoming projects

**The petition has been signed by 121 people from 15 nations and sent to the INAF President on September 28, 2010. We warmly thank all the people who supported our group by signing it.**

# PNGS

### logical workflow

The input catalog, representing the universe, provides the incident spectra, i.e. the spectra as they arrive on the telescope

The instrument model and the observing strategy are used to simulate the spectra on the FoV as they will be observed by the instrument

The reduction pipeline extracts the 1D spectra from the 2D simulated images

The redshift measurement on the 1D spectra obtains the recovered redshifts and an estimate of how much the measure is "reliable" (as it will not be possible to manually check millions of spectra)

The cosmological computations based on the recovered redshifts gives the FoM for the BAO measure

The FoM tells us if the instrument meets the scientific requirements of the EUCLID mission

### implementation

Each logical step can be executed using different modules; the user defines at runtime the set of modules to be used for a given simulation run (see below some of the possible use cases).

At the moment the used modules are based on legacy software (like aXe, aXeSIM and EZ) and prototypes developed by us (RESS).

As soon as the OUs codes will be ready they will be easily included in the system for a more realistic simulation chain.

FASE (the Future Astronomical Software Environment) is a project that has been funded by the european community (OPTICON Network 9.2, FP7) to develop a standard interoperable and distributed framework within which integrating the legacy astronomical software and developing the future astronomical software.

It provides:

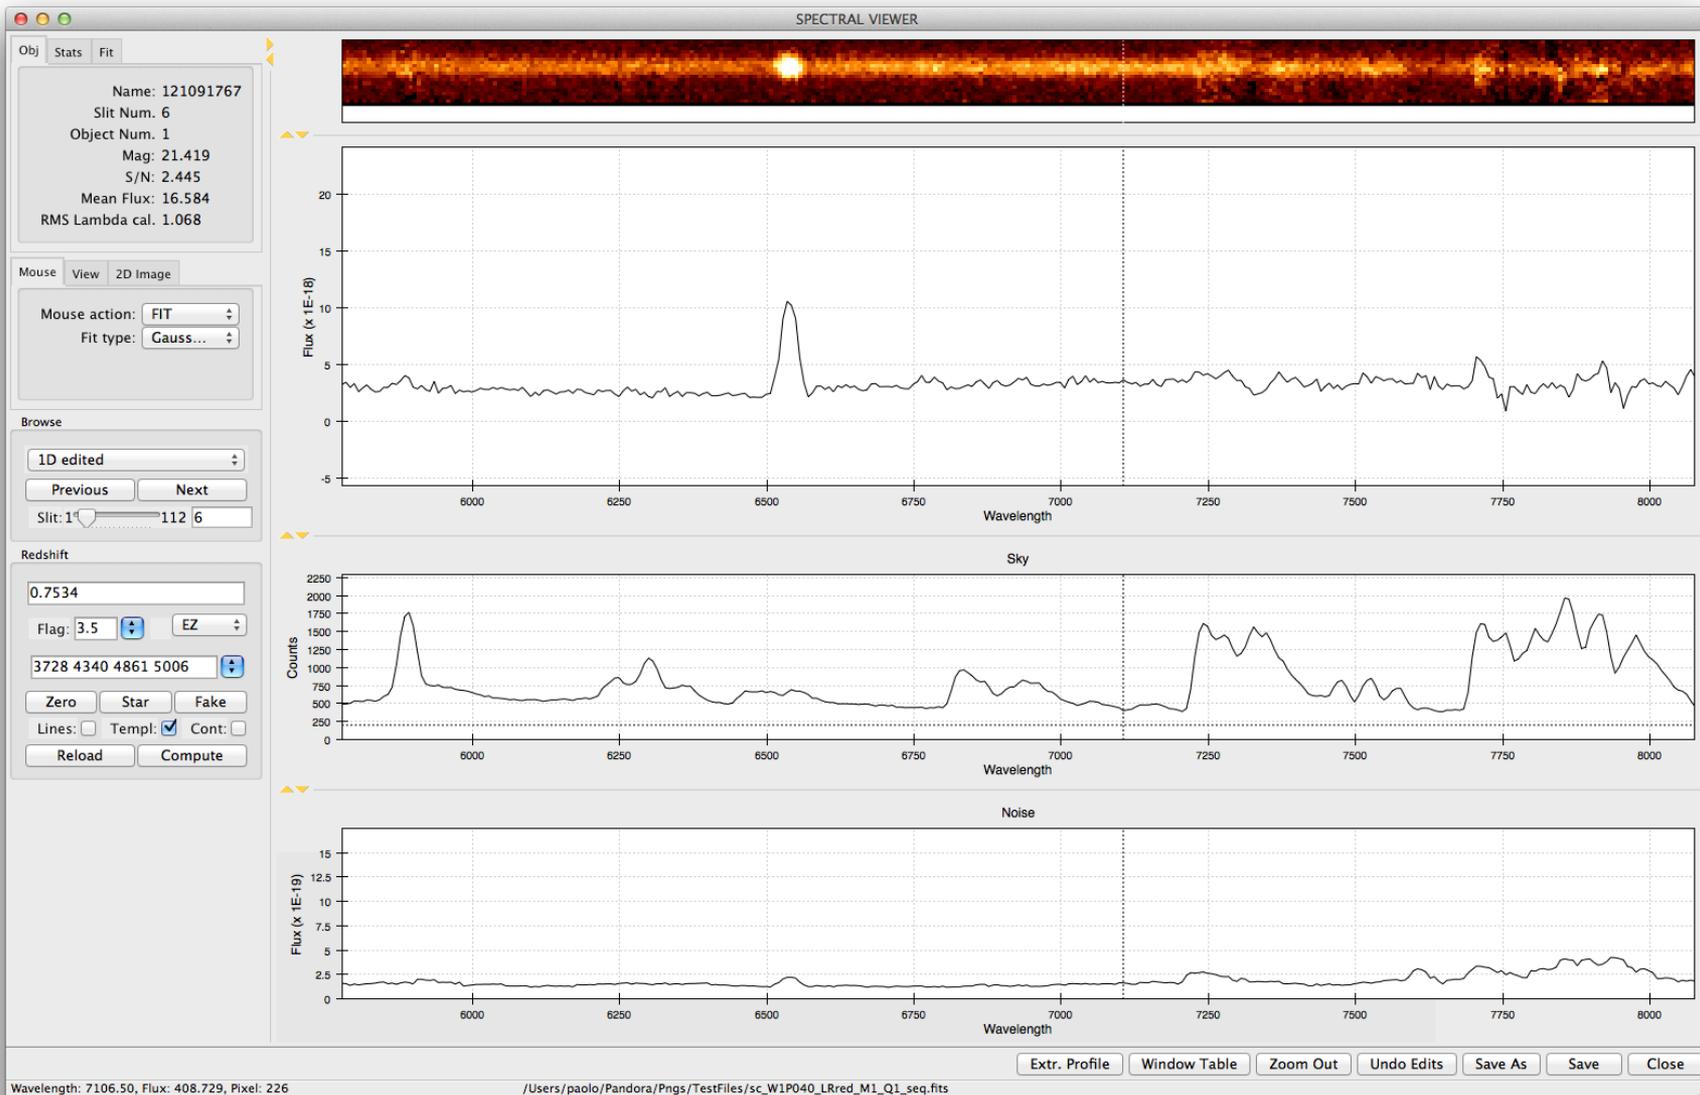

- a set of libraries to exploit the framework resources
- an execution engine to launch the applications on a scalable environment
- a packaging system, to pack the applications and easy their distribution, installation and execution

which simplify the use and development of astronomical applications, managing at run-time their life-cycle and providing a set of facilities to enable a real inter-operation between the different components involved (no matter in what language they are written).

For further details see <http://faserepo.lambrate.inaf.it/media/tutorial/cur/html/main.html>

pandora.ez

# PNGS

# pandora.ez

The screenshot displays the 'COMPUTE REDSHIFT' interface of the pandora.ez software. The interface is divided into several sections:

- Input Section:** Includes fields for 'Redshift value: 0.1', 'Flag: 1.0', 'EZ', and 'Comment: 3727'. There are buttons for 'Zero', 'Star', and 'Fake', and checkboxes for 'Lines', 'EZ lines', 'Template', and 'Continuum'.
- RELOAD FROM SUMMARY:** A table listing spectral lines with columns for Rest-fr. w., Name, Type, Exp. w., and Comment.
- ADVANCED / SIMPLE:** A tabbed interface for configuration. The 'ADVANCED' tab is active, showing 'LAMBDA' (Min: 11000.0, Max: 20000.0) and 'Z' (Min: 0.7, Max: 2.1, Step: 0.001) settings. The 'TEMPLATES' section has checkboxes for 'Star', 'Qso', 'Emission', 'Galaxy', and 'Custom'. The 'RUN' section has 'SOLVE' and 'EXEC' buttons.
- RESULTS:** A tree view showing the file structure of the 'Solve result' folder, including subfolders for 'All templates', 'star', 'qso', 'emission', and 'galaxy'. The 'emission' folder contains various template files like 'Im.txt', 'Sbc.txt', 'Scd.txt', etc. The 'galaxy' folder contains files like 'E.txt', 'E\_red.txt', 'wds\_reddest.txt', etc. Below the tree are 'BEST' and 'Reset Axis' buttons.
- Graphs:** Two empty plot areas labeled 'correlation' and 'fit', both with 'redshift' on the x-axis.

# pandora.vipgi

The screenshot shows the Vipgi software interface. At the top, there are window control buttons and a title bar with the name 'Vipgi'. Below the title bar is a toolbar with icons for file operations and a help icon. The main interface is divided into a left sidebar and a main content area. The sidebar has tabs for 'Reduction', 'Browsing', and 'Plotting'. Under 'Reduction', there are several buttons: 'Create Bad Pixels Image', 'Append Bad Pixels Image', 'Adjust First Guess', 'Create Master Dark', 'Create Master Bias', 'Create Image Master Flat', 'Locate Spectra', 'Create Master Lamp', 'Preliminary Reduction', 'Create Sensitivity', 'Reduce Single Observations', 'Reduce Sequence of Obs.', 'Apply Atm. Correction', 'Create Summary File', 'Split 1D Spectra', and 'Measure Redshift'. The main content area has a 'Projects:' dropdown menu set to 'VIMOS\_PROJECT'. Below this, there is a section for 'WIP111-LRred-1-Q1' with a table of observation data. The table has columns for FILETYPE, ORIGIN, and OBSERVING NIGHT. Below the table, there are two more tables: one for 'msFlat\_WIP111\_LRred\_1\_Q1.fits' and 'msLamp\_WIP111\_LRred\_1\_Q1.fits', and another for 'Tab\_st\_LTT-4816\_LR\_red\_mar2', 'msBias\_spec\_mar2011\_Q1.fits', and 'Tab\_st\_EG-274\_LR\_blue\_Q1\_m'. At the bottom right, there are buttons for 'Back', 'Import', 'Rescan', 'Unclassified', and 'Calib. Files'.
